

DOORPASS

Key Features

Simple to Install and Use

Two Reader (1 or 2 Door) Controller

Stand-Alone Operation

Compatible with any Card Technology

Anti-Passback

Door Monitoring

Easy to upgrade

The Doorpass is our basic access control system for simple, stand-alone installations. The keyboard programming allows you to carry out all the required commands, including the enrolment and deletion of cards, the setting of Anti-Passback, establishing door alarms, and outputting events to a connected printer.

The Doorpass is capable of reading almost any kind of access control technology, making the product as versatile as it is reliable. In addition, the unit can be set into Anti-Passback mode, ensuring that the same card cannot be used to allow multiple users to enter or exit a building.

The compact 2 door system can control one door in both directions (entrance and exit), or two separate doors. A bank of 4 inputs allow you to add door contacts, alarms and request to exit (RTX) switches, whilst the product can be easily upgraded to integrate with GuardPoint Pro.

Technical Specifications	
Software Supported	GuardPoint Pro (when upgraded)
